DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-9, 11-18, 26-31 and 33 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for some of the disclosed pH, does not reasonably provide enablement for the entire range of the claimed pH. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims. The applicants amended the claims to recite application of the solution comprising ethylenediamine at concentration 0.1 to 3.0 % and an acid in the amount such that the composition has pH from about 5.0 to about 12.0.

The entire range of pH is not enabled because even 3.0 % solution of ethylenediamine without acid would have pH below 12. Adding acid to the solution would reduce the pH. The fact that the solutions having even higher concentrations of ethylenediamine than 3.0% have pH below 12 is evidenced by the Ethylenediamine article from www.chemicalland21.com and the abstract of the paper of Selwyn et al in Studies in Conservation, vol.2 No 2.

Information Request

3. It is noted that the applicants clarified that Fritz Redeker and Fred Redeker are the same person.

Information Disclosure Statement

4. The information disclosure statement (IDS) submitted on 7/21/03, a copy of which was filed on 09/08/06, was considered by the examiner.

Response to Arguments

5. Applicant's arguments filed 09/08/06 have been fully considered but they are not persuasive.

The applicants argue that the rejection made under 35 USC 112(1) is not proper. The applicants based their arguments on the fact that undiluted ethylenediamine has pH up to 14.

This is not persuasive because the claims recite a composition comprising 0.1 to 3.0% of ethylenediamine, acid and water. Such composition is ethylenediamine diluted with water and acid. The aqueous solutions of ethylenediamine (compositions comprising water and ethylenediamine) having even higher concentrations of ethylenediamine than 3.0% have pH below 12 even without an acid, as evidenced by the previously cited documents. The presence of acid would lower the pH further.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

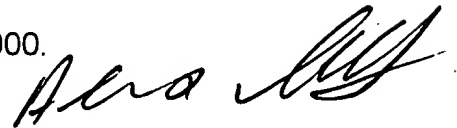

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
